A Demographic Study Relating To The Holocaust

**By
Mr. J. P. G. Holswilder c. 1985**

Data

1. *The American Jewish Yearbook* of September 14, 1939 until October 2, 1940 (volume 41) states in all of Europe: 5,589,837 Jews.
- 2a. If Russia is included: 9,394,837 Jews (The Spotlight October 1979, page 7)
3. The same Jewish Yearbook of 1939, page 583: World Jewry: 16,180,000
4. *New York Times* of February 22, 1948 "from their own secret census": between 16,150,000 and 19,200, 000
5. A publication of the American Jewish Committee dated 1940: "in 1933: 15,315,359".
6. Prof. Arthur Rupin of the Hebrew University in Jerusalem: in 1938: 16,717,000
7. The World Almanac of 1945: 15,192,089
8. The World Almanac of 1946: 15,753,638
9. The American Jewish Committee in the World Almanac of 1949: 16,643,120
10. Rabbi Soetendorp in his TV-interview on the Netherlands network in March 1980: World Jewry demography: 14 million Jews in 1980.

11. Dr. Wehner on the West German TV-network I on March 16, 1980: World Jewry in 1980: 16 million.

12. Gassings started on February 20, 1943 and were stopped in October of the same year. (i.e. 238 days. JPGH)

13. Gassings were resumed in May 1944 and ended on November 17, 1944. (i.e. 201 days. JPGH)

14. Total duration of gassings as culled from 12 and 13: 439 days

15. Data as mentioned Nos. 12 and 13, are based on the sworn testimony on September 13, 1945 (depositions Nos. 4401 and 4463) of Dr. Reszo Kasztner - a Hungarian Jew, chairman of the Committee for the Rescue of Jews - testifying before the International Military Tribunal that the gas chambers having allegedly existed in Auschwitz were in operation from the 20th of February 1943 until the 17th of November 1944 and that they were out of operation from the autumn of 1943 to May 1944.

16. Dr. Wiesenthal, the notorious Nazi hunter, declared in 1976 that **NO** Gas chambers had at any time existed on German soil and those in operation were exclusively situated in Poland. (Auschwitz, Sobibor, Maidjanec and others, all behind the Iron Curtain; attention is drawn to the fact that for a number of post-war years tribute was paid to the "many Jews", gassed in the Dachau, Buchenwald and other concentration camps situated in West Germany and "gas chambers" were shown the gullible visitor, on the ground of which the conclusion can safely be drawn that certain structures or facilities were made to appear as "gas chambers" by the United States' occupying forces **AFTER** Germany's surrender, as I myself have seen them on a visit to devastated West Germany's Dachau concentration camp in 1952!)

17. The first statement of the claim that the Nazis exterminated 6 million Jews was made in the *The New Jewish Frontier* in January, 1945. (The Journal of Historical Review volume four, number 4. 1983)

18. Population build-up as an average in western countries: 0 - 19 years, 40%; 20 - 59 years, 50%; 60+, 10% as derived from the eminent French demographer, Robert Pressat's *L'Analyse Demographique*, page 35, diagram 2.

CONCLUSIONS

The subdivision into three different groups is, unquestionably, also applicable to the Jewish sector of the European and Eastern European populations.

The child-producing part of the women of these populations is to be found in the middle group of 20 - 59 years, half of which consists of women, i.e. 25%.

Since the menopause starts around the age of 45 a conservatively estimated 15/40th or 37, 5% of 25% or 9,% should be subtracted from 25%, so that only 15,7% of world Jewry **MINUS** 6,000,000 must have succeeded in supplying the depletion of their number by gas-induced deaths. But, there is more that we should take into account before we embark on our thesis to prove the ineluctable refutation of the wild "Myth of the Six Million." To wit: not all of the female part of **WORLD** Jewry would have been able to take part in the replenishment of their decimated European numbers! The endless stream of survivors who keep appearing on the scene to this day could not by any stretch of the imagination have "executed" their marital vows in these, for them, hectic times! As the exact number of survivors (specifically the female part) is by no means ascertainable because of no available demographic data we will leave them out of this analysis. Let's now have a closer look at the points 1-9 of the list of data. Point 3 emphatically states that World Jewry just prior to World War II consisted of 16.180.000 Jews.

1939 (1) In all of Europe (<i>The Spotlight</i>)	5,589,837
(2) In Russia	<u>3,805,000</u>
In Europe and Russia	9,394 837
Outside Europe 8, Russia	<u>6,785,163</u>
1939 (3) World Jewry	16 180 000

(the numbers between brackets refer to the list of data)

The alleged gassings. in Europe refer to 9,394,837 persons — of which number should be subtracted 6,000,000 dead so that with Germany's surrender on 18.4.45 - 3,394,837 Jews must have remained in Europe and Russia. By inference there were outside this area 6,785,163 Jews.

This remnant of 10,180,000-Jews of which number only 15,7% or 1,598,260 women of childbearing age could have accomplished the job, meaning everyone and no one in the age-bracket of 20-79 year excepted and assuming that no deaths of natural causes, miscarriages and infertility cases occurred.

Let's now see how many children must have been born during the following periods of time based on the post-war demographic data issued by the American Jewish Committee in the World Almanacs i.e. points 7, 8 and 9 in the above list of data.

a. (7) $15,192,089 - 10,800,000 = 4,392,089$ children born in a time span of 18.5.45 - 31.12.45 or 258 days! As the female gestation period lasts 270 days this allegation is utter nonsense and therefore further attention to a. will henceforth be discarded.

b. (8) $15,753,638 - 10,800,000 = 4,953,638$ children born in a period of time of 18.5.45 - 31.12.46 or 623 days!

c. (9) $16,643,120 - 10,800,000 = 5,843,120$ age children born during the time span of 18 May 1945 and 31 December female, single, married.

Re.: b.

4,953,638 children born to 1,598,260 women of child-bearing age during 623 post-war days, means 3.1 children to each and every female, single, married, fertile and no deaths and/or pregnancy miscarriages having occurred.

Since the human female gestation period lasts 270 days and a conservative 6 weeks (*) recovery period be added after each pregnancy the resultant 312 days can lead to the obvious and only conclusion that, if the incidence of quadruplets or even triplets be excluded, we are faced with the biological miracle of AT LEAST 1,651,213 twins and the same number of single babies born to the above 1 598 260 women! To the writer's knowledge no such extraordinary, most peculiar biological phenomenon has ever been recorded and should therefore be discarded forthwith as complete and stupidest nonsense!

* Oosthoek's Encyclopaedia sub PREGNANCY

Re.: c.

Here we tread on safer ground! Since 5,843,120 offspring born to the 1,598,260 women mentioned earlier these children born to each and every female - and we repeat, no one excepted, nor deaths of natural causes or infertility cases allowed - amounts to 3,6 children in the span of time of 1719 post-war days. That is: $1719/3.6 = 477,5$ days per child, including a gestation period plus a "rest" period = 312 days. Quite feasible, though miraculous all the same!

Miraculous in the sense that we are most conspicuously confronted with the utter impossibility of a short term growth performance never before exhibited in recorded world history. Our analysis proves irrefutably that this sudden and explosive Jewish birthrate that the holocaust-protagonists want us to believe, abruptly grinds to a halt the moment this people reached again their pre-war 16 (or is it 14?) million markin 1949 or even earlier. As the population growth is found to be $16,643,120:101800 = 157.4\%$ in 4.7 years or $57.4:4.7 = 12,2\%$ Per year the "six-million myth" wants us to swallow the nonsense that they "succeeded" in adding during 4.7 consecutive years more than 57% to their number where other peoples and the world population as a whole need MORE THAN 57 YEARS for to accomplish! (R. Pressat's *l'Analyse*, page 23: demographic constant of world population growth; 1% per annum.)

If we now turn to the problem of feasibility of exterminating 6,000,000 humans by the Nazis then several questions come to mind.

1. Why go to the extreme of building structures for the sole purpose of killing people if a more obvious and less costly means would be available through the bullet?

2. Especially if Germany's position in the war years 1944 and part of 1945 - the period of time during which the alleged gassings took place - be contemplated the question arises why Germany, having its railway system utterly devastated by continuous allied bombing raids, would stubbornly resort to the means of transportation by rail to an outpost of the then existing Reich - Poland - of 6,000,000 people! It would have meant at least the use of 85714 railway cars (6 000 000:70*) and if one trainload of "doomed ones" be estimated to comprise 100 cars and two locomotives (for uphill traction power supply) the implication is obvious: 857 trips up and down to Poland involving 1700 odd locomotives! And... our follow-up question of "what did those trains have as payload on the return-trip?" remains unanswered. But the \$64,000 = question would be - if at least common sense and logic govern our deliberations on this subject - "Who, in his right mind, would ever charge his country with this additional and unbearable burden over a stretch of 800 km. knowing full well that the national railroad system being heavily devastated, the country itself in dire straits as far as the war is concerned, every available railroad car is needed for transportation of its own fighting men and supplies?"

* Paul Rassinier's *DEBUNKING THE GENOCIDE MYTH* - page 363 and note 23 on page 384

2. An intriguing problem that has no solution whatsoever because of its improbability is the cremation of 6,000,000 corpses.

Let it suffice that a succinct resume is given of a research into this matter. It bears the heading: **A SIMPLE CALCULATION IN 1946**. Written by Reinhard K. Buchner - in vol.2, no.3 of *The Journal of Historical Review* - Torrance, Cal. USA.

Needless to mention that this writer availed himself of many details relating to the process of cremating corpses by having gathered the necessary particulars through interrogation and intermediary of experts. (This concerns the time-factor playing an important role in the process of cremation) Excerpt:

"To emphasize that this technical problem has existed openly all the time – but is simply pretended not to exist by historians and Holocaust theory promoters - the picture as it presented itself as early as 1946 is first reproduced here. The mathematical part is simple. If one knows the total number of "cremator hours" (that is the sum of all existing cremators multiplied by their individual time of operation in hours) and the incineration time per corpse, one can calculate the theoretically possible maximum number of cremations.

It is convenient to write the relevant correlation in the form of a simple equation:

$$\frac{N = C \times T}{I}$$

N = Number of possible cremations

C = Number of Cremators

T = Time of operation in hours

I = Incineration time for single charge cremation (one corpse in hours)

The term "cremator" as used here refers to a single furnace.

Having no other relevant information in 1946 I proceeded to calculate the theoretical number of cremators necessary to incinerate 6,000,000 corpses during an "assumed" operational time of 5 years i.e. roughly the full duration of WWII." End of quote.

Since we now know the exact point in time of the start of the alleged homicidal gassings - see data note 10 - we are in the position to substitute the true numerical values in the above formula.

A Demographic Study Relating to The Holocaust

To arrive at the number of cremators needed the formula changes into:

$$C = \frac{N \times I}{T}$$

Substitution gives:

$$C = \frac{6,000,000 \times 5}{439 \times 24} = 2847$$

cremators in which the value 5 constitutes the expert empirical duration to incinerate a corpse. Since no more than a couple of dozens of cremators have been found to exist in Germany we are here confronted with an insuperable hurdle, to say the least.

But for clarity's sake let's assume that 100 cremators existed in Germany's Polish concentration camps, then we have:

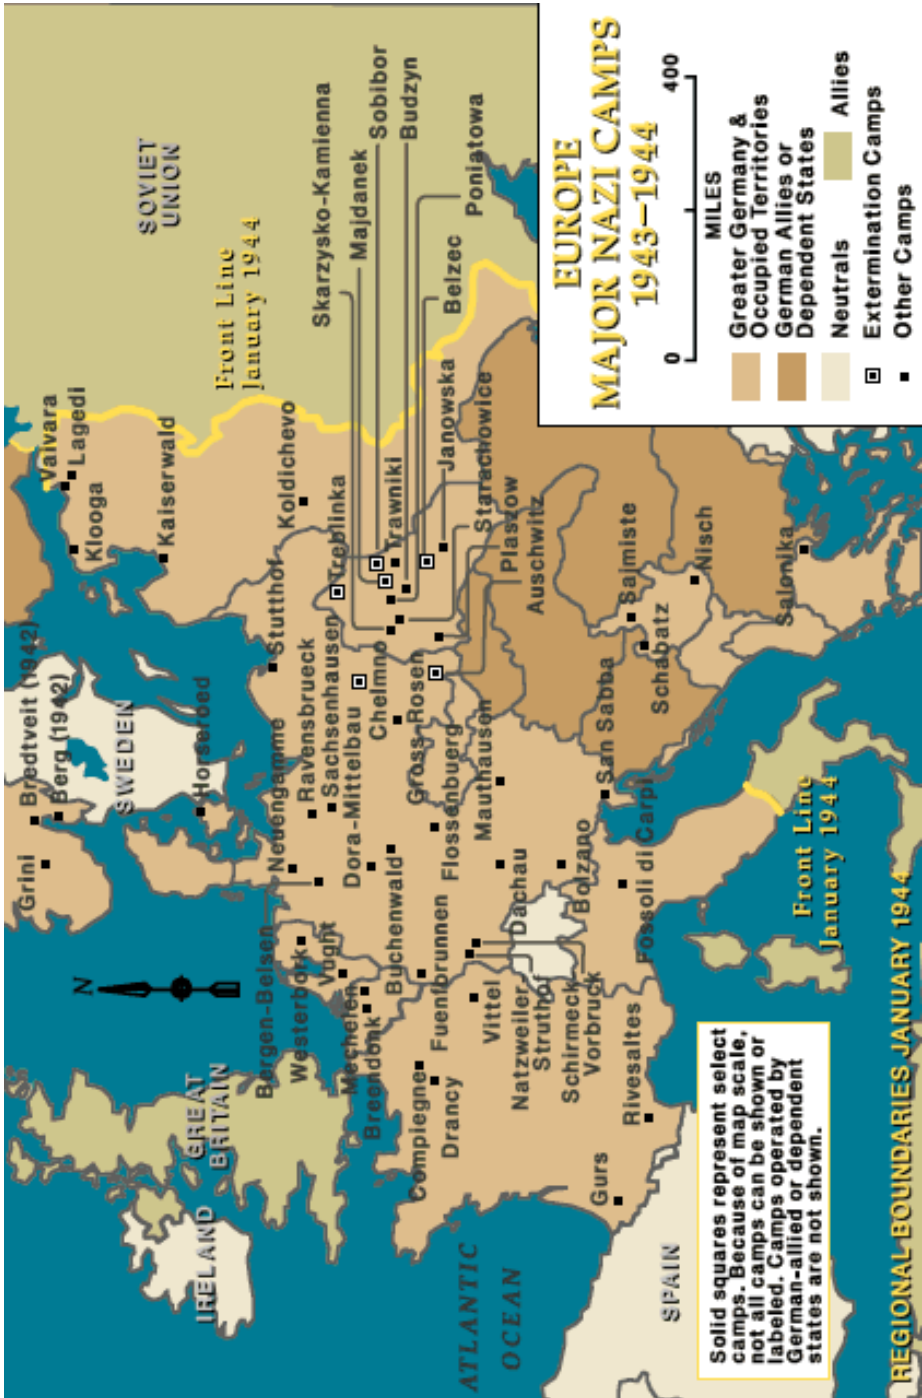

$100 = \frac{6,000,000 \times 5}{T}$ = 300 000 hours or 12,500 days of 24 hours each, reserved for necessary overhaul and/or maintenance of the cremators. But from the points 10 and 11 of the table of data we derive that only 439 days were involved in doing away with the 6,000,000!

Is there any doubt in anyone's mind that we have all these 40 post-war years been taken for a ride? A political lie so grotesque, that it boggles the mind and the only question that remains to be answered is: **WHY?**

A simple question that has a simple answer. The International Zionists have, after securing a stronghold in the Middle East, they call Israel (the biblical name of a people and never of a country gives food for thought) succeeded in bilking the Christian nations, especially W. Germany, of billions of dollars as a restitution of sufferings sustained by Jewry endured under the heel of Nazi-Germany. And the swindle still hasn't come to an end!!!

**Even official memorial
plaques cannot decide on how
many Jews were killed in the
so-called holocaust!**
