14 Days That Saved the World

By Willie Martin

IN SEVERAL PREVIOUS Z-GRAMS I HAVE REPEATEDLY MENTIONED THE IMPORTANT ZUNDEL CONCEPT that "America **Must** understand and come to terms with the Second World War - that Adolf Hitler did **Not** fight it for the sake of imperialistic expansion."

Whenever I say that, there are half a dozen people telling me that World War II has ended - half a century ago. Well, some of us beg to differ. What we are witnessing today geo-politically is merely an extension. Therefore, it is imperative to understand that War II was not fought for "Lebensraum" as we have been so unctuously taught to believe.

It was, according to Revisionist thought, a fully justified pre-emptive strike against a carefully detailed and smoothly financed New World Order plan, spawned in the banking canyons of New York and poised and ready to be implemented by the monster Joseph Stalin.

In "*Pipeline to Moscow*", Robert W. Lee writes in the New American, September 1996:

"Despots throughout history have employed the Big Lie to beguile, manipulate, and control would-be vassals. The Master Conspiracy—for instance, has for over two centuries honed the technique into a razor-sharp tool for sculpting its New World Order. And the biggest of its corpulent fabrications may be the pretence that the United States has been the world's foremost bulwark against communism.

In reality, the historical record brims with hard evidence that rather than effectively opposing communism, our government has consistently nurtured communist leadership with material aid and offered crucial strategic support for communism's advance. In short, our government, contrary to the "official history", has been the single most powerful

benefactor of the Master Conspiracy's communist arm." Against that backdrop, Ernst sent me a rather large and somewhat technical essay entitled "14 Days That Saved The World" by Paul Ballard. I am breaking it into three parts to keep the content "bite-sized".

Here is Part I of why and how the Third Reich Wehrmacht went to war against the Soviet Union: "The critical moment of World War Two - if not the entire Twentieth Century - is generally accepted to have been Adolf Hitler's decision to launch an "unprovoked" attack on a hitherto neutral and peaceful Soviet Union. Up until recently, this (Fuehrer decision) has been regarded as a mistake, which doomed Nazi Germany.

"Icebreaker" by Russian military historian Viktor Suvarov exposes this picture as nonsense. This extensively researched piece of historical revisionism provides compelling evidence that Operation Barbarossa was a reluctant pre-emptive strike against a massive Soviet military machine poised to invade not just Germany but the whole of Western Europe.

Suvarov quotes top secret Soviet documents which make it crystal clear that Soviet military theory was based on offence and the conquest of territory "for the World Revolution." And this theoretical plan for offensive war was matched by practical preparations in every branch of the armed forces.

In 1939 Adolf Hitler came into the war with a total of 3,195 tanks, fewer than the Kharkov Works in the "peace loving" Soviet Union was producing every six months on a "peace time" footing. The works produced the BT high speed tank, which was capable of 100 kmph and had a range of 700 km. Based on a design by the American tank genius J. W. Christie, these had their engines and transmission systems at the rear and were 25 years ahead of their time. By 1936, BT tanks were fording deep rivers under water and driving along river beds.

On unmade roads the Mark BT operated (although not very effectively) on heavy tracks, but once on good roads, their tracks were discarded and the tanks raced ahead on wheels. The only real roads were to be found in western Europe, in particular the German autobahn network, for which

the tanks were intended. The claim that Stalin's tanks were not ready for war is not true; they were not ready for a defensive war.

The same applied to Soviet aircraft in both numbers and quality. Communist falsifiers in the post war period claimed that although the Soviet Union had many aircraft, they were inferior. In fact, the most heavily armed fighter in the world in 1939 was the Russian Polikarov I-16. The type 17 had two synchronized 7.62 mm machine guns and two 20 mm cannons mounted on the wings, conferring a weight of fire twice that of the Messerschmitt 109E-1, and nearly three times that of the Spitfire 1.

Soviet aircraft builders created a plane, unique in the world, which had an armoured fuselage. The IL-2 was virtually a flying tank with extremely high powered weaponry, including eight rocket launchers. Soviet planes were the first in the world to use rockets in combat.

The fatal weakness in this formidable airforce was that none of its pilots had been trained for dogfights with enemy planes. The Soviet battle plan relied on a massive surprise attack to knock out the enemy airforce on the ground in the first hour of the war.

By mid-June 1941, in final preparation for such a blow, Stalin's planes themselves presented an ideal target, packed wingtip to wingtip on temporary airstrips immediately behind the front line, rather than dispersed several hundred miles to the rear - as they would have been in preparation for a defensive war.

Likewise, airborne assault troops are only useful to an aggressor. Countries concerned with defence need very few. Hitler had created only 4,000 paratroopers by 1939, but Stalin already had more than a million - 200 times more than the rest of the world, including Germany, put together. There were 10 Corps, each supported by airborne artillery and even battalions of light amphibious tanks.

Soviet engineers were also hoping to land hundreds, or even thousands of tanks in the west. Antonov, the aircraft designer, suggested that the

ordinary tank be fitted with wings and a tail with its hull used as a framework. The tank crew controlled the flight by turning the turret and raising the barrel of the cannon! The entire construction was astonishingly simple. The risk of flying it were unusually great, but human life was cheap to Stalin. Just before landing the tank engine started up and the tracks revolved at maximum speed. The KT then landed on its tracks and gradually braked. Prototypes were actually flown but, like the millions of paratroopers, they were no use in the unexpected defensive war started by the German invasion.

Once the paratroopers had seized key points and airfields, the Soviet plan then called for huge numbers of reinforcements to be flown in. As well as building massive numbers of C-47 (Dakota) heavy transport planes under license from the U.S. government, Stalin ordered a huge glider building programme. The ten different designs included Antonov's multi-seater assault glider - the A-7 and the KZ-20, which could carry 20 soldiers.

The human cost of this extravagant expansion was horrific. Having sold Russia's artistic treasures and vast reserves of gold, platinum and diamonds, the Bolsheviks began their notorious collectivisation programme. The peasants were driven by force into collective farms so that crops could be taken from them without payment. Ten to sixteen million died from collectivisation and the resulting famine, compared with 2.5 million Russians in World War I. Yet Stalin sold five million tons of grain abroad every year..."

I am in need of a slogan. I am a great believer in the subconscious coming up with the perfect solution at the right time by finding precise words, and the slogan I need should say something like this, sharply put: "We have been lied to about everything else - why should we not have been lied to about the nature of the Hitler mission when he took on the Soviet horror in 1941?"

I think that a slogan would go a long way as a shortcut to shedding more light and less heat overall. These days, the mood in America is so corrosive and suspicious of the Hidden Hand that people are perfectly capable of

recognizing and, hence, loathing media and government dripping duplicity about most anything - but try to tell them that maybe, just maybe, Adolf Hitler was not the monstrous dictator who walked knee-deep in blood - but was, in fact, a moral military leader of almost mythical dimensions - and watch an otherwise perfectly normal and reasonable person's mind snap shut and stay shut like an oyster.

But small beginnings, nonetheless, are there. This morning I found in my mailbox the following, written by one enthusiastic newsgroup warrior maddened by the unctuous Nizkorites, their bloated falsity and shallow explanations of what was really happening in World War II: "This holocaust thing is the smallest part of the issue - it is the generally false condemnation of Germany for everything.

We have plenty of accepted facts showing that is nonsense. (W)e can—start posts with lines like "People used to believe the war propaganda that Germany started the war —" while drawing the noose around this holocaust thing. With patience, there will be no room left for this holocaust thing to run when all the rest around it is has been accepted as false." He is so right! So absolutely on the money!

With that as a backdrop, here is Part II of "14 Days That Saved the World", an essay by Paul Ballard that summarizes what Adolf Hitler saw, and what he did, in the long summer days of 1941 while Stalin was amassing and positioning a huge offensive assault force along the western borders to treat Europe to a New World Order: "Some of the (Ukrainian grain) money was spent on the thirteen fortified regions which were built along the Soviet Union's western frontier, in a strip of territory unofficially called the Stalin Line. A complex system of combat and supply installations, armoured and built of concrete, was constructed along the 30 - 50 km deep zone; there were also reinforced underground premises to serve as storage depots and command posts.

The fortified regions were built with enormous effort and vast expense during the first two Five Year plans. In 1938 it was decided to reinforce each region by building heavy artillery carponiers. More than a thousand combat installations a year were concreted into the region.

In 1939 the Molotov-Ribbentrop pact was signed. Once Poland had been partitioned, there was no longer a neutral buffer zone. Stalin could have ordered the garrisons on the line to be strengthened and additional belts of fortified zones could have been constructed behind and in front of the existing line. But in fact the existing fortified regions were dismantled. Some military buildings were handed over to collective farms for vegetable storage, but most were buried or dismantled. In the spring of 1941 powerful explosions thundered along the 1200 km line as armoured firing positions were blown up.

The reason was simple: Stalin had decided to spread Bolshevism westwards, and the belt of fortifications would have blocked supply routes, creating dangerous bottlenecks for the millions of tons of ammunition, food supplies and fuel needed for the offensive.

Only a week after the Molotov-Ribbentrop Pact was signed, Stalin played his first dirty trick. Hitler began the war with Poland as they had agreed, but Stalin stated that he was not yet ready.

Hitler found himself on his own, and immediately at war with France and Britain as well. Meanwhile, Stalin marked the conclusion of this "non-aggression" treaty by introducing military service.

A new "defensive" line was started in partitioned Poland, but although constructed very slowly and visibly, it remained a comparatively light and uncompleted series of fortifications. Mines were removed from the vicinity of bridges, and mile after mile of barbed wire was cut. Unnecessary bridges across rivers on the new frontier remained intact, and later greatly aided the German advance.

In the spring of 1941, the Germans began similar preparations. Both sides erected offensive fortifications. Before launching an attack, great masses of troops would have to be concentrated in very narrow sectors, German troops in the Suwalki and Lyublin salients, and Soviet troops in the area of Lvov and Bialystok. In order to assemble these shock groupings, the secondary sectors were denuded of troops - the lightweight fortifications prevented them from being completely exposed.

By 1941, as the last obstacles to the Red advance were removed, the Soviet Union possessed thirty separate armies, the largest military force the world had seen, and one which could not be maintained for long without mass starvation. The plundering of neighbouring countries would have been the only means of paying for and justifying the existence of such a force.

Many of the best armies were not deployed to fight the Germans, but to invade virtually defenceless neutral states, as Stalin had already done throughout eastern Europe. The 9th army was concentrated on the frontier with Rumania; an assault crossing of the Danube was planned by its 14th Rifle Corps. The 12th and 18th "mountain armies" were positioned to move southwest along the Carpathian mountains to cut Germany off from the Ploesti oilfield in Rumania, and west into Czechoslovakia, which would enable Stalin to cut the Rumania-Germany oil pipeline. Without this irreplaceable Rumanian oil, the tanks, lorries, submarines, battleships and planes which were massed far away in the west would simply grind to a halt.

The seven armies in the Second Strategic Echelon included many thousands of men who had been released from concentration camps that spring to expiate their "guilt" by fighting for the Soviets. The generals and officers were also usually former political prisoners and were desperate to prove their worth. Their lives and those of their families were at stake.

They were known as the "Black Divisions" because many still wore their black Gulag uniforms. The most powerful of the Second Echelon armies was the 19th, which was transferred from the North Caucasus to approximately 150 km north of the Black Sea. It contained mountain rifle divisions which could only be used in Rumania. They were making their way to the frontier when Germany invaded.

They were not alone. In the final preparations for the attack on the West, millions of soldiers were still heading for the front in trains. Very often their ammunition and heavy weapons were being transported separately. Huge supply dumps were stockpiled just a few miles from the German lines. Most of the airforce was similarly exposed.

For a few critical days, Stalin's mighty invasion machine was incapable of defending itself. Stalin believed he had convinced Hitler that the Soviet Union was truly neutral and assumed the Germans were busy finalizing an invasion of Britain. Hitler's conquests had created an unprecedented situation in Poland, Czechoslovakia, Denmark, Norway, Belgium, Holland, Luxembourg, Yugoslavia, France, Greece and Albania. Their armies, governments, parliaments and political parties had been destroyed. Stalin's huge armies were in an ideal position to take over Europe, but Hitler guessed Stalin's design so that even in 1945 the Soviets got only half of Europe, and some territory in Asia.

At a Politburo meeting on 21st June 1941 G.R.U. (Military Intelligence) chief general Golikov reported that there was a massive concentration of the German airforce on the Soviet border, enormous reserves of ammunition and a regrouping of German forces. He even knew the name of the operation - Barbarossa."

Just think about it and give credit where credit is due: Had it not been for "Barbarossa", you might not be alive today. The Bolshevik torture chambers and death pits which would claim millions of victims in the enslaved nations of the East would have spread throughout the West as well. This ghoul called "New World Order", now looming to swallow and spit out your children, was in the wings already in 1941, poised to unleash itself on Christianity.

Much of the content below is based on the 1984 Victor Suvorow book with the English title "The Icebreaker: Who Really Started World War II" as summarized in an insightful essay by Paul Ballard: "Stalin at first refused to believe what was happening. He had established a sophisticated intelligence network to give him long advance warning of a decision by Hitler to wage war in the frozen wastes of Russia.

His key indicators were breathtakingly simple. For an army to survive the winter, every man would have to possess a thick sheepskin greatcoat. Soviet agents therefore kept a close watch for a sudden rise in the demand for sheepskins and a fall in the price of mutton as slaughtering was stepped up.

Meanwhile, other agents scoured rifle ranges for scraps of cloth used by German soldiers to clean their weapons. Soviet chemists then analysed them in order to find out whether the Germans had developed a gun oil which would not freeze in the harsh weather.

There was still no sign of such an oil - or a non-freezing diesel engine oil - in June 1941, so Stalin was convinced that Hitler had no intention of attacking him. Hitler would have his forces concentrated in France, or even fighting in England, as the Red Army cut off their only source of fuel, crashed into the virtually undefended Reich and then "liberated" the whole of western Europe.

Hitler, of course, had not ordered such preparations because he had not planned on a war against Russia. Only in the spring of 1941 did intelligence reports of troop concentrations and Soviet moves to cut Germany's oil lifeline with Rumania force Hitler to take the desperate chance of opening a second front with a hasty pre-emptive strike.

Initially, at least, the gamble paid off. Caught in transit or crammed together in their own start-off positions, whole Soviet Armies were annihilated. Most of the air force was destroyed on the ground. The thousands of lightly armoured assault tanks were virtually helpless; forced to operate in the roadless wastes of Russia, they were easily out manoeuvred by the Germans' conventional cross-country tanks.

All this makes "Icebreaker" the definitive account of the build-up to Operation Groza ("Thunderstorm"), the Soviet conquest of Europe scheduled to begin early in the morning of Sunday 6th July 1941.

Suvorov's revelations about the massive expansion of the NKVD - blood-soaked forerunner of the KGB - are particularly chilling, as these killers would have moved in behind the assault troops to liquidate "class enemies." The Bolshevik (Jewish) torture chambers and death pits which claimed millions of victims in the enslaved nations of the East would have spread throughout the West as well. With Germany and France under the Soviet jackboot, Italy and Spain would quickly have fallen, too. And Stalin's one million paratroopers would have made short work of seizing the airfields of southern England to clear the way for a full-scale invasion.

Lenin and his pupil Stalin never made any secret of their desire for a second World War to establish a Communist Europe. For the fact that this monstrous plan failed, the democrats, simpering priests and court historians have no one to thank but Adolf Hitler. Without the man they love to hate, they would have been first against the wall."

"The Nazi command succeeded in forestalling our troops literally two weeks before the war began." (General S. P. Ivanov, Chief of the General Staff Academy of the Armed Forces of the USSR, 1974)
